

DDPM Exam 2 — 30-Minute Final Cram Sheet (Modules 4 & 5)

DDPM Exam 2 Cram Sheet (Final 30 Minutes)

[!WARNING]

Operational Parameters & Scope Rules

- **Confirmed Operational Parameters:** 45 questions | 60-minute duration (3:30 PM–4:30 PM IST, Sun 16 Aug) | No negative marking (answer 100% of questions).

I. Top 5 Core Frameworks (Strictly Capped: 5 Frameworks)

- SERVQUAL (5 Service Quality Dimensions - RATER)** (`M04-T02`, `[class-confirmed]`)
 - Reliability (dependable delivery), Assurance (employee courtesy/trust), Tangibles (physical/digital UI assets), Empathy (individualized care), Responsiveness (prompt service). Gap = $\text{Perception (P)} - \text{Expectation (E)}$.
- NIST Cybersecurity Framework (NIST CSF v2.0 - 6 Core Functions)** (`M05-T03`, `[official-external]`)
 - Govern (GV) (*new 6th function in v2.0*), Identify (ID), Protect (PR), Detect (DE), Respond (RS), Recover (RC). Zero Trust: "Never trust, always verify."
 - 3 Accountabilities: Product Owner (owns Product Backlog), Scrum Master (servant-leader), Developers (usable Increments).
 - 5 Events: Sprint (1–4 wk), Sprint Planning, Daily Scrum (15 min), Sprint Review, Sprint Retrospective.
 - 3 Artifacts & Commitments: Product Backlog $\rightarrow$ Product Goal; Sprint Backlog $\rightarrow$ Sprint Goal; Increment $\rightarrow$ Definition of Done (DoD).
- ATAR Product Adoption Model** (`M04-T03`, `[credible-secondary]`)
 - Awareness $\times$ Trial $\times$ Availability $\times$ Repeat. Calibrated Trial = $(0.80 \times \text{Top Box \%}) + (0.30 \times \text{Second Box \%})$.
 - Functional Suitability, Performance Efficiency, Compatibility, Interaction Capability, Reliability, Security, Maintainability, Flexibility, **Safety** (*new 9th characteristic added in 2023 edition*).

II. Top 13 High-Yield Concept Names (Strictly Capped: 13 Concepts)

- Data-Driven Attribution (DDA)** (`M04-T05`): Machine learning sequence analysis; legacy rules-based models retired in GA4.
- U-Shaped & W-Shaped Attribution** (`M04-T05`): U-Shaped (50% First Touch, 50% Lead Creation, 0% Middle); W-Shaped (30% First, 30% Lead, 30% Opp Creation, 10% Middle).
- Top 2 Box (T2B) Discounting** (`M04-T03`): 80% of Top Box ("Definitely Buy") + 30% of Second Box ("Probably Buy").
- Level of Detail (LOD) Expressions** (`M05-T04`): `FIXED` (ignores view dimensions; executes *before* dimension filters), `INCLUDE`/`EXCLUDE` (executes *after* dimension filters).
- Commitment-Trust KMs** (`M04-T02`): Relationship Commitment and Trust as central Key Mediating Variables in relationship marketing (Morgan & Hunt, 1994).
- Vertical vs Horizontal Channel Conflict** (`M04-T05`): Vertical (different levels e.g. manufacturer vs retailer); Horizontal (same level e.g. distributor vs distributor).
- Next-Best-Action (NBA) Engine** (`M05-T01`): Real-time machine learning decisioning to serve optimal offer/action at specific user touchpoints.

10. **Privacy by Design (PbD)** (`M05-T03`): Proactive privacy embedded as default setting throughout product engineering lifecycle (7 principles).
11. **Zero Trust Architecture (ZTA)** (`M05-T03`): Explicit verification, least privilege access, assume breach posture (NIST SP 800-207).
12. **Price Discrimination Tiers** (`M04-T06`): 1st Degree (personalized WTP), 2nd Degree (self-selecting versioning/volume), 3rd Degree (segmented groups).
13. **Customer Lifetime Value (CLV)** (`M05-T02`): $\$CLV = \frac{\text{ARPU} \times \text{Gross Margin \%}}{\text{Monthly Churn Rate}}$. Benchmark $\$CLV / CAC \geq 3:1$.

III. Top 10 Critical Exam Traps (Strictly Capped: 10 Traps)

1. ■ **GA4 Attribution Model Retirement**: GA4 retired legacy rules-based models (First Touch, Linear, Time-Decay, Position-Based) in mid-2023. GA4 supports ONLY **Data-Driven Attribution, Paid and Organic Last Click, and Google Paid Channels Last Click**.
2. ■ **Adobe Marketo Measure U-Shaped Intermediary Credit**: U-Shaped attribution assigns **50%** to First Touch and **50%** to Lead Creation Touch, giving **0%** to intermediary touches. Do not assign equal split to middle touches in U-Shaped!
3. ■ **Top 2 Box Discounting Factors**: Top Box intent is discounted to **80%** and Second Box intent is discounted to **30%**. Never sum them 1:1 without discounting!
4. ■ **ISO 25010:2023 9th Quality Characteristic**: The 2023 revision replaced the 8-characteristic model with **9 characteristics** by adding **Safety**. Interaction Capability also replaced Usability.
5. ■ **Tableau Order of Operations for LODs**: `FIXED` LODs execute **BEFORE** Dimension Filters; `INCLUDE` and `EXCLUDE` LODs execute **AFTER** Dimension Filters.
6. ■ **NIST CSF v2.0 6th Function**: NIST CSF v2.0 added **Govern (GV)** as the 6th core function alongside Identify, Protect, Detect, Respond, Recover.
7. ■ **Scrum Accountabilities vs Roles**: The 2020 Scrum Guide eliminated the term "Roles" and established **Accountabilities**. The Scrum Master is a servant-leader, NOT a project manager or task assigner.
8. ■ **Vertical vs Horizontal Channel Conflict**: Vertical conflict occurs across different channel levels (manufacturer vs retailer); Horizontal conflict occurs between competitors at the same level (retailer vs retailer).
9. ■ **Confirmed Operational Parameters**: 45 questions in 60 minutes (3:30 PM–4:30 PM IST), no negative marking (answer 100% of items).
